The image fills the entire band; the type sits in the lower-left ~50% with a dark gradient over the bottom half.

DESKTOP HERO · ~16:6 at 1440px viewport · 88vh tall

Bleeds full width. Background image gets a dark gradient overlay (lighter at top → darker at bottom).

**EXPORT NOTES**

- Desktop: ≥ 2400px on long edge, JPEG q82 or WebP q78 (~250 KB)
- Bleed: full-width, no margins; image is cropped via background-size: cover
- Tone: works best near-monochrome and dark enough that white type pops. Otherwise the gradient overlay does heavier work.

Mobile · 380px viewport

How the same one-pager stacks on a phone. Hero crops differently — see notes.

MOBILE NOTES

- Hero crops to a tighter aspect ratio.
Make sure key image content is centered or near the bottom-left.
- Type scales down via clamp() — smallest is 2.6rem ≈ 42px on phone.
- Cards stack to one column.
- Logo wall drops from 4-up to 2-up under 560px viewport.
- Sticky nav hides the link list and shows brand + theme toggle only.
- Lazy-load + ~250KB first paint — the page is interactive before any below-the-fold image fetches.

Sketch page · clean hero frame

Same hero proportions, no ghosted type. Use this for a clean draft.

PROPORTIONS

≈ 16:6 at desktop width. Aspect ratio scales taller as viewport narrows (see Page 3).

Faint dashed = type quiet zone (lower-left, ~55% × 55%). Crosshairs = thirds + center for composition.
